

GALVANIC COATINGS

GALVANIC TREATMENT & ROBOTIC POLISHING

At Rujz Design, we provide high-quality nickel and chrome plating for decorative and technical components across a wide range of industries. Our expertise is built around components where surface quality is not merely a finishing detail, but an essential part of the final product.

We work with aluminium, steel, brass and copper, with particular expertise in the demanding process of aluminium chrome plating. From individual components to repeat production, our focus remains the same: precise processing, consistent surface quality and reliable, repeatable results.

From demanding aluminium components to decorative and technical applications, we deliver reliable nickel and chrome finishes where surface quality, precision and durability matter.

ABOUT US

The galvanic surface treatment is a great way to increase the visual appeal of any part as well as protect it from corrosion, wear and tear.

Rujz Design galvanization plant started by obtaining an existing galvanization line from its previous, closed down owner.

Renovated and adapted for its speciality, **aluminium galvanization** as well as steel, inox, and brass galvanization coatings.

The company is specialized in **decorative component coatings**, visible parts of products requiring high attention to detail throughout the galvanizing process.

FLEXIBILITY. QUALITY. RELIABILITY.

The galvanic surface treatment is a great way to increase the visual appeal of any part as well as protect it from corrosion, wear and tear.

The philosophy of Rujz Design Galvanic is based on **adaptability** to client's needs and requirements.

Flexible with the deadlines and capability of responding to urgent requirements of clients.
Consistent quality is delivered on the finishes throughout the time and orders.

ROBOTIC POLISHING

As an additional in-house service, Rujz Galvanic Coatings offers robotic polishing of metal components, ensuring consistent surface quality and a highly repeatable polishing process.

TECHNICAL CAPABILITIES

MAXIMUM PART DIMENSIONS

1450 × 700 × 400 mm

MAXIMUM SURFACE AREA

180 dm² per part

MATERIALS

Aluminium · Steel · Stainless Steel · Brass

PLATING PROCESS

Rack plating only

AVAILABLE FINISHES

CHROME · NICKEL

Both finishes are available for all materials listed.

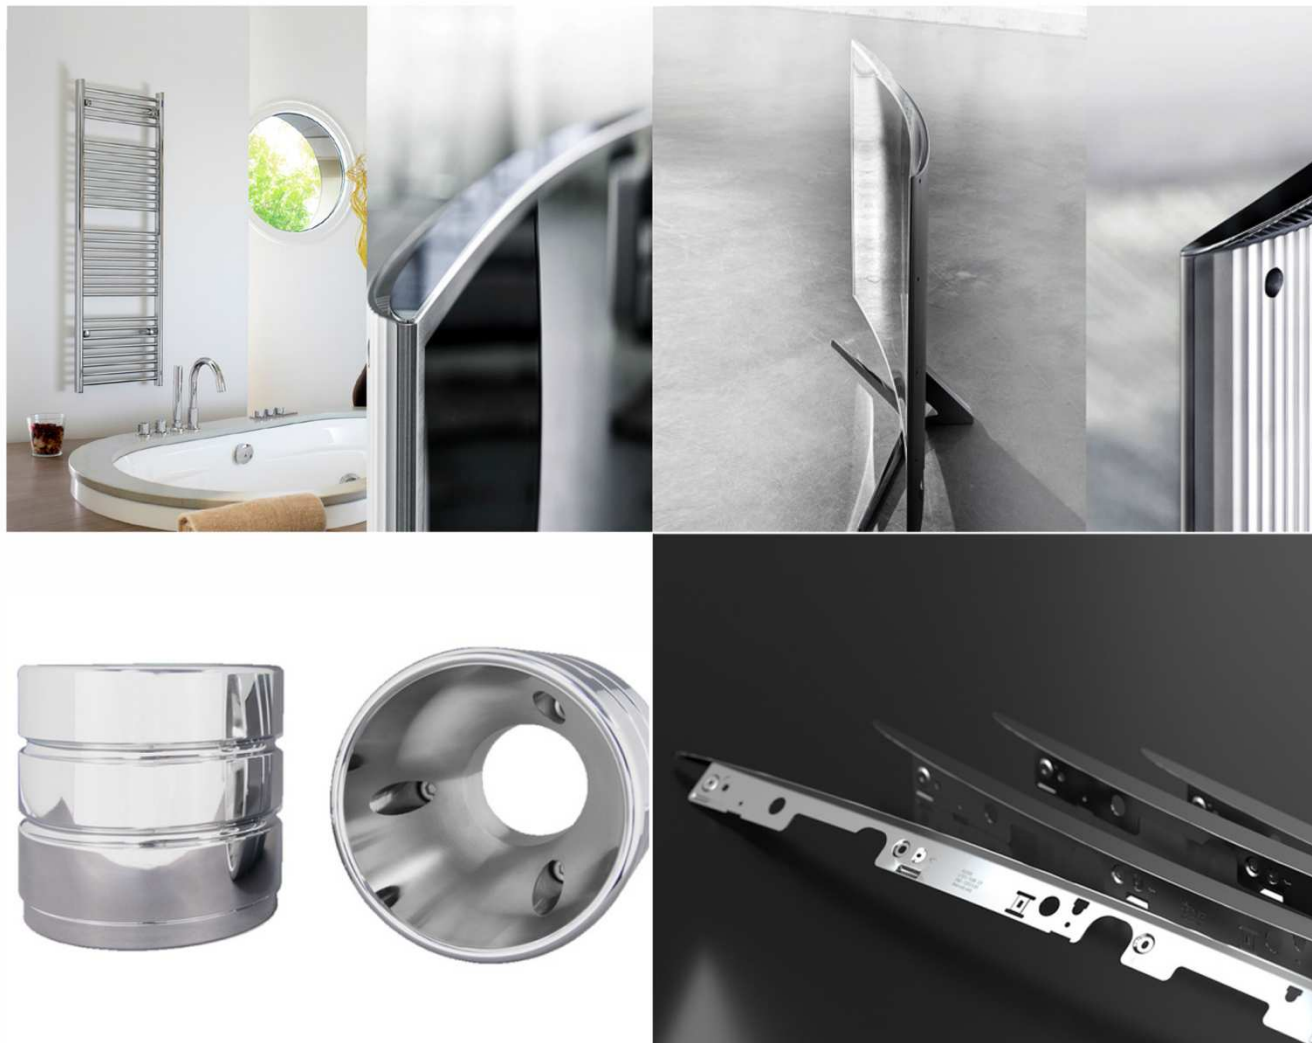

APPLICATIONS ACROSS INDUSTRIES

Rujz design Galvanic Coatings provides nickel and chrome finishes for decorative and technical components across a wide range of industries. We specialize in visible parts where surface quality, appearance and attention to detail are essential.

Our expertise covers automotive and motorcycle components, household appliances, locks and door hardware, furniture handles and legs, bathroom equipment, technical and decorative components, as well as metal and copper components for electronic applications.

From motorcycle exhaust systems and furniture hardware to bathroom fittings, appliance parts and precision technical components, each part is treated according to its base material, geometry and final application.

WHERE SURFACE MATTERS

Automotive & motorcycle components | Home appliance components
Locks & door hardware | Furniture handles & legs | Bathroom equipment
Technical & decorative components | Copper electronic components
Metal electronic components
